Subject: Updates Sony Equipment and STC slow bandwidth yesterday

Good day =oss

I continued to investigate STC's slow =andwidth yesterday and this morning and found our AI server (for =r. Gortzell and Amen) was using 2.3 MB last night and early this =orning. I suspect that this was the cause of STC's slow internet =ccess. I have emailed Amen to verify my findings. In addition, I will =nquire if STC's 10MB service needs to increase to support their =onnection without interfering with STC's day to day internet =perations.

I reviewed the existing Sony Equipment. It is a =urround sound receiver / dvd player all-in-one device. I believe this =as either in the kitchen or chillax room before the renovations =nd the new TVs were installed.

Do you wish =e to setup tomorrow in the kitchen or chillax for you to hear it, or =ust remove it?

Regards

Jruan
