I also would like you to consider that music made little progress until it had its own notation. staff keys timing, representations rests. etc ( rough calculation is that beethoven 5th, has about 30-45k notes. the same number of active genes. in a dna strand. ) does protein folding set a rythym, some fold faster than others. do some only fold when they are in proximity to one other ( a amusical chord ). as you said one note only has meaning when compared to all notes , and the ones similar to it .?

on a different note :) -- I wonder if biology would be helped if it also had its own notation . division. replication. growth, etc . even dance has its own language. A0 laban invented one.

--

please note
