The very best dock location is going to be over in Christmas Cove wher= the old dock was. It wont be in the same footprint because endanger=ed corals are now in that footprint. And by the way that darn boat (w=ich is now gone - I think DPNR actually did something) broke an Acropora c=rvicornis. I am going to make sure that they know. I am probab=ly based on what I have seen suggest a little farther to the south. W= can make a dock your barge can land on the end of and have plenty of room=for boats. This water goes to 20ft really quickly.

What I need to know is what width is bar=e ramp on your barge so I can get an idea of how wide a dock I should look=for a path through the 6 darn ESA listed corals. The I can lay out s=veral footprints and paths and we can see what you like best.
