I met several times with Zed and Ed with Boat.

The concept is to build a rear seat deck that houses 3 Batteries, 3 oil fil=ers and 15 gallon fresh water wash tank. This will be located under the permanent rear seat deck, along with ManHole=access points for maintenance excess.

Strong consideration will be taken so these access points do not rattle in =eavy seas.

Forward of the rear deck, Zed will fabricate four removable fiberglass seat=bases, 2 on each side to make the "U" shape seating area.,

The idea will be to have the option of removing these seat bases if y=u require large luggage loads

Is this correct approach?
