Hi!

My friend Nick Kovarsky, we met with Peter Thiel with the help of you, is going to be in NY and SF from 14th till 20th of February.

Unfortunately I can not come with him. =A0

Is it possible to create his meeting with Vincenzo?

2016-02-03 15:18 GMT+03:00 jeffrey E. <jeevacation@gmail.com</=>>:

yes of course

It's hard to tell w/o pr=per code/documentation (couldn't find much online). In general the fou= things are:

1) the devil is in the details= meaning that even if in theory it's all solid the implementation migh= have bugs. There's no definitive technical solution for that though=C2

2) anything that is "custom" (eg:=they have a custom wifi protocol) is a red flag because it means that it h=sn't been properly vetted and might be broken/buggy

3) there aren't enough details online to tell but it seems=to me that to speed up the blockchain verification they partially centrali=e the network by using their own "supernodes" (essentially the w=llets talk to the supernodes vs the actual blockchain). The security of th=se servers seems key to me and they gloss over it online

4) the mesh network implementation is completely up in the air (jud=ing from what's public) and it could go horribly wrong. So that needs =urther verification

Also (5), in general th= disadvantage of distributed /open things is that it is a lot easier to st=al money vs a closed network (like swift).

Are yo= looking to invest into this thing? If so , I'd suggest a few th=ngs:

A) because problem (1) above is not =C2 completely solvable, they need to have a plan. Part of it is technica= (do continuous code auditing, pentesting, on board proper crypto people, =tc), the other part is legal/financial and pr. Specifically they should ha=e some kind of insurance and they should have a pr disaster recovery plan.=A big disadvantage of decentralized system is that you don't have anyb=dy to trust and you don't have a closed network that can make stealing=money hard, they need to address that

B) re=listically nobody is going to attack them until they become significant en=ugh from a financial standpoint. This gives them time to work on A. That s=id they should avoid making enemies (the "disgruntled" hacker ty=e)

Hope this is useful, if you get more stu=f from them I'm happy to look into it more. Also if you do invest I ca= help them with (A) if needed.

It's a v=ry dumb platitude but "security is a process" is true.

Unrelated: checkout edge.org <<http://edge.org/>> , I think you'll like it. There'=s a short video with Minsky that is absolutely fantastic
