thank you for hosting me last night I co=ld not pass up the opportunity to see you both, but thought it prude=t not to strain Valeria's time.. (good juice)=C2 My thinking is as follows. I suggest that artificial int=elligence and common sense are the computational models.=C2 but computation does not need language. It appears=along the inverse function ie questions ? what if? the= you need a language that has infinite possible configurations. . even =A0 a dog knows what happens if i throw the ball, only human th=ught asks what if , no gravity, what if, ball filled wit= helium etc. I think it is AI to the the power of =inus 1. so if chemical feedback loops , began to antic=pate their reactions to many previously unsearched configurations.=C2
