Dear Jeffrey - Regarding our convers=tion yesterday, we'd propose the following for a $1M investment:

=span style="font-size:12.8px">Any sale at or above $50M, the investor ge=s 20%
Any sale between $30M and $50M= the investor gets 22%
Any sale at or=below $30M, and the investor's share as a percentage is calculated as =09X^2 - 4.6X + 80, where X is the sale price in millions.

This will g=arantee a return on the investment for sales as low as $1.5M (which would =roduce a 10% return). A $4M sale would return the investor $2.5M, a =10M sale would return $4.3M, etc.

Would welcome your thoughts an= your investment.

Regards,
Dan
