Subject: Jeffrey Kogan - Question

JE:

You expressed a special =nthusiasm about 'Space' when speaking to Faith♦=A0about Dylan and coincidentally I read about a tiny company about to=go public that is primed to kill off Comcast, Verizon, AT&T, Cox and C=arter in one clean shot by putting a constellation of micro-routers in low=earth orbit (750 miles vs 22,000 miles). Each router, the size of a =esk, sends ten beams down to earth. Each beam covers 400 miles.=C2♦ Phones and computers will receive a strong signal anywhere on earth.=C2♦ Lastly, they mentioned some backers - Masa ("The Bill Gate= of Japan"), Virgin Atlantic, Airbus, Qualcomm and Coca Cola.

The above information was sent to me in the mail with the=purpose of enticing me to subscribe to their monthly newsletter. In =exchange, the author will reveal the name of this company and how to invest=and profit from same. Supposedly, this company is positioning for an=IPO.

Have you heard about this company and what t=ey are supposedly about to do or is this a bunch of crap? If it is a='real deal', can you advise me how to profit from it?

Jeffrey Kogan
