Subject: RE: Question

Hi Larry, certainly if anything is found technically wrong with the engine we will cover the repair under Corporate Care. While I believe your go forward plan will be worthwhile to address additional key variables, it cannot say if this does not correct the problem that would confirm a technical problem with the engine, so please make your decision accordingly. I do think the go forward plan we discussed Friday night will allow us to confirm the engine's contribution to the vibration your are feeling in the cabin. Let's talk more Monday.

Best Regards,

Kathleen Goncalves  
Regional Customer Manager

Subject: Question

Morning Kathleen,

We have accomplished fan balancing three times First in Teterboro with Rolls Royce, Islip NY with Dallas Airmotive, most recent, Rolls Royce in West Palm Beach, as well as applied DFL Dry Film Lubricant Rolls Royce Montreal. Per Gulfstream Tech support in Brunswick we re-rigged the spoilers, and checked flight control rigging and cable tensions. Savannah Gulfstream rigged flaps, replaced vortex generators on upper fuselage, changed both HP regulator valves, replaced left air cycle machine, replaced gear door seals, changed entrance and rear baggage door seals.

Jacksonville Paint repainted wings. Islip, NY Hawthorne Global Replaced "Isolation mounts" on both engines.

We are now willing to replace left and right "trunion mount canisters", we are only doing this with the understanding that Rolls Royce will live up to its obligations under corporate care if this does not fix the problem that was obvious to everyone on our test flight and approve early shop visit.

Best Regards,

Larry Visoski  
Director of Operations
