for ehud. last week of july would be good .he's =A0 in or around new york we could fly to meet you. anywhere 2= he will also come to my ranch with his wife. (valeria i think will tr=ly like) in new mexico during some period in august, of course you and=valeria =ould be most welcome . I can arrange everything- private flights/ =A0 all costs of course. fyi If you want some co when valeria is gon= Im happy to buy you lunch.

try this argument on . I h=ve been trying to describe things to you as shapes. the reason is th=t I find that most of the proposed minimal computing modules =re in the main inherently linear. that cant be r=ght. they follow a machine computing mathematical model I wou=d ask you to think more of music, where there is both a=C2 horizontal melody ,prosody ,and its harmony ie vertical informati=n at every point. This simple version would describe a two dimension=l map. the fluctuations in shape if the horizontal and vertic=l were mapped would be like a flag in the wind. now imagine wr=ting on the flag. . though the patterns are infinite , =ll words would still fall only along the flag , no matter what the s=ape. the flag is grammar. like a handkerchief it can fol= back on itself. (recursive) (limited int he real world to 8 or l=ss folds by the way) . the sentences either fall on the flag or the= don't . it represents a coherent map. \ these=maps should be similar in all sense making modules vision etc.=C2 .

I very much appreciate the dichotomy o= your science- taking disjointed rough thinking and making them =A0 smooth , elegant and inspiring, while your role in politics =seems exactly the opposite, taking the intellectual smooth and lazy=C2 and sticking a disjoint in their thinking .

=C2
