Marr , -try , probabiltly , symmetry. ent=opy. it might look like computation but it is not. it mi=ht look like algorithm but it is not. the flip of a coin does not co=pute, have an algorithm or a mechanism. though it might look as if it does. =AO it is not an input system, there is not mechanism drivning the heads an= tails towards equal numbers. , there is not nature looking to see what th= previous results were and computing the next result. like your ug it is more of a miracle.

On Tue, Jun 23, 2015 at 9:54 PM, Noam Chomsky <>[REDACTED]>>
=rote:

I wouldn't take the term "80 mechanism" too literally. It refers to whatever is taking place in the brain. For some, as most of those in the Nowak group, it means neural nets. For Gallistel, it's processes internal to the cell. Useful to look at these matters in terms of Marr's three levels: computation, algorithm, mechanism.

3. my admittedly naive point is that "mechanism", I believe, is the wrong concept. driven in error, by the machine-computer analog since the early 1900s. instead think of probability, it is not a mechanism,

On Tue, Jun 23, 2015 at 9:05 PM, Noam Chomsky <jeevacation@gmail.com>
<<mailto:jeevacation@gmail.com>> > wrote:

1.=C2 Not a trivial matter. I'm not the best person to ask. I'd suggest contacting people who have really thought seriously about these issues, like Robert Pollin, a fine independent economist at U Mass Amherst

2.=C2 Sherman's speculation is an interesting extension of recent discoveries about conservation, deep homologies, regulatory circuits, and other elements of what's sometimes called "the evo-devo revolution." It remains to be seen whether anything can be done with it. I think you underestimate the contributions of Berwick and his students, including Yang.

3.=C2 The idea that there is a "ug" for vision, language, etc., seems to be essentially what Randy Gallistel calls "80 the norm in neuroscience," quoted in the paper on modularity that I sent you. And yes, they're certainly connected, at least at the level of cells, and presumably well beyond. These are live and significant research areas. These "central modules" do not have input or output, but they are accessed by input systems and in some cases, like language, by output systems. That seems a fair picture of the rough cognitive architecture. I don't follow the rest. It's true that work on human language uses as evidence what is available, namely performance. And much of the work unfortunately is fascinated by the droppings, just as in other fields. But there is some work that seeks to discover the mechanisms, as discussed in the papers I sent you.

Subject: Re: Re:

it is my failing not =ours. the old math requires numbers . too li=iting. (we can put a metric overlay on later in the chain) i=agine a shape in real space. it is readily apparent if a line either fits on the shape or not . how=do you know. ? you compare the line with the shape. =A0 your visual system allows the mental shape to either map onto or not =A0 onto the shape in a coherent manner. the shape is not an input =A0 device ,it is an object . the organizing principle of the shape is la=guage, the shape is a collection of grammars. line= on the shape are either coherent or not. coherent ones are le=itimate sentences .

yang is flexible in his use of the term probability.=. for example he in a number of papers refers to zipf as a probabiltiy dis=ribution. i have checked a number of his papers after your last remark, I

think it is a mistake. he means that after empirical measurement . for ex word frequency,=C2 . if ten times out of 100 the corpus has the word x. =A0 then he describes the probability of finding the word as 10 percent . this is not correct. it is only the probability of finding the word in the=frequency list . but he is very accomplished at mathematical m=dels.

On Sun, Jun 21, 2015 at 1:03 PM, Noam Chomsky <[REDACTED]>

<mailto:[REDACTED]> =rote:

Interesting image, but I don't see what it tells us about language.

The problem looks to me like this, roughly.

Take, say, the human visual system.=C2 There's a genetic component that determines that humans will=have a mammalian and not an insect visual system, and much else. Same with other subsystems of the organism – "organs," =80 modules." Language in particular. The technical name for this component, whatever it turns out to be, is UG. UG therefore determines that certain systems are possible languages for humans, others are not. I presume that is what the "biological organizing principle =9D for language is. It's plainly not an input system, though=it determines possible input systems for human languages. I don't see how we improve understanding by looking at it from this perspective.</=pan>

A minor technical problem, not serious, has to do with distinguishing digit=I infinity from continuity, like continuous lines on the surface of a hemisphere.

I think you'll find Yang interesting.

Subject: Re: Re:

1. I will wait on you. we can craft a fun few days

2, try this on but only if you get a moment , i know you are busy

it appear to me that ""language" can be defined as the=C2 biological organizing principle that creates a shape spa=e. "coherent sentences " are defined as those that f=t on the shape. The projections on the sensory motors, allows commun=cation. . There are an infinite digital number of sentences.that do fit on the shape , but=orders of magnitude more, that do not fit.- to attempt a naive=representation, imagine a hemisphere, (symmetric), =A0 any continuous line drawn on its surface , is a sentence. =C2 there are infinite numbers of lines that can be drawn. however , try=ng to connect two points , directly without traversing the hemishpere =A0 is also infinitely possible but most solutions need to leav= the surface. The principle that organizes the shape is NOT an input device. one can map inputs onto the shap= but it is not THE shape , ex, a hemisphere bowl in 3 =pace, analogy, one can put marbles in the bowl and they will map a p=th to the bottom. but the shape of the bowl . determines how f=st they move, and in which direction, . the shape of the bowl is the language= there is a shape for vision as well. = it exists without input, certain paths are more probable etc.

3. I will contact Yang

On Sat, Jun 20, 2015 at 10:41 PM, Noam Chomsky <<= href="mailto:[REDACTED]" target="_blank">[REDACTED]>=wrote:

Valeria's not here right now,=so will have to check with her about late September. Really intrigui=g possibilities, and a delightful offer.

On Yang, I read his work quite differ=ntly. He does make use of word frequencies and probability distribut=ons, but as far as I am aware in pretty straightforward and innocuous ways. =A0 And he's quite sophisticated about these matters. Smart and int=esting guy. You might want to contact him directly.

I don't recall his using Zipf=E2 s "laws," but it wouldn't matter much. =A0 Mandelbrot showed back in the '50s that they were a statistical artifact, near meaningless. =A0 I was, incidentally, surprised to see how he dealt with this result in =is autobiography. I think he called it his "Keplerian moment=" or something like that.
