it is my failing not =ours. the old math requires numbers . too li=iting. (we can put a metric overlay on later in the chain) i=agine a shape in real space. it is readily apparent if a line either fits on the shape or not . how=do you know. ? you compare the line with the shape. =A0 your visual system allows the mental shape to either map onto or not =A0 onto the shape in a coherent manner. the shape is not an input =A0 device ,it is an object . the organizing principle of the shape is la=guge, the shape is a collection of grammars. line= on the shape are either coherent or not. coherent ones are le=itimate sentences .

yang is flexible in his use of the term probability.=. for example he in a number of papers refers to zipf as a probabiltiy dis=ribution. i have checked a number of his papers after your last remark, I think it is a mistake. he m=ans that after empirical measurement . for ex word frequency,=C2 . if ten times out of 100 the corpus has the word x. =A0 then he describes the probablility of finding the word as 10 perc=nt . this is not correct. it is only the probablility of finding the word in the=frequency list . but he is very accomplished at mathematical m=dels.

On Sun, Jun 21, 2015 at 1:03 PM, Noam Chomsky <[\[REDACTED\]](#)>

<mailto:[\[REDACTED\]](#)> =rote:

Interesting image, but I don't see what it tells us about language.

The problem looks to me like this, roughly.

Take, say, the human visual system. \Rightarrow There's a genetic component that determines that humans will have a mammalian and not an insect visual system, and much else. Same with other subsystems of the organism – “organs,” \Rightarrow 80 modules.” Language in particular. The technical name for this component, whatever it turns out to be, is UG. UG therefore determines that certain systems are possible I-languages for humans, others are not. I presume that is what the “biological organizing principle \Rightarrow 90 for language is. It's plainly not an input system, though it determines possible input systems for human languages. I don't see how we improve understanding by looking at it from this perspective. $\langle/\mathit{pan}\rangle$

A minor technical problem, not serious, has to do with distinguishing digit= infinity from continuity, like continuous lines on the surface of a hemisphere.

I think you'll find Yang interesting.

Subject: Re: Re:

1. I will wait on value=ia. we can craft a fun few days

2, try this on but only if you get a moment , i know you are busy

it appears to me that “language” can be defined as the biological organizing principle that creates a shape space. “coherent sentences” are defined as those that fit on the shape. The projections on the sensory motors, allows communication. . There are an infinite digital number of sentences that do fit on the shape, but orders of magnitude more, that do not fit. to attempt a naive=representation, imagine a hemisphere, (symmetric), \Rightarrow any continuous line drawn on its surface, is a sentence. \Rightarrow there are infinite numbers of lines that can be drawn. however, trying to connect two points, directly without traversing the hemisphere \Rightarrow is also infinitely possible but most solutions need to leave the surface. The principle that organizes the shape is NOT an

input device. one can map inputs onto the shape but it is not THE shape , ex, a hemisphere bowl in 3 =pace, analogy, one can put marbles in the bowl and they will map a path to the bottom. but the shape of the bowl . determines how fast they move, and in which direction, . the shape of the bowl is the language= there is a shape for vision as well. = it exists without input, certain paths are more probable etc.

3. I will contact Yang

On Sat, Jun 20, 2015 at 10:41 PM, Noam Chomsky <<= href="mailto:[REDACTED]">=wrote:

Valeria's not here right now,=so will have to check with her about late September. Really intriguing possibilities, and a delightful offer.

On Yang, I read his work quite differently. He does make use of word frequencies and probability distributions, but as far as I am aware in pretty straightforward and innocuous ways. =A0 And he's quite sophisticated about these matters. Smart and interesting guy. You might want to contact him directly.

I don't recall his using Zipf=E2 s "laws," but it wouldn't matter much. =A0 Mandelbrot showed back in the '50s that they were a statistical artifact, near meaningless. =A0 I was, incidentally, surprised to see how he dealt with this result in =is autobiography. I think he called it his "Keplerian moment=" or something like that.
