Subject: language

it appear to me that ""language can be defined=C2 as the biological organizing principle that creates a =A0 shape space. "coherent sentences " are defined as=those that fit on the shape. the projection on the senso=y motors, allows communication. . There are an infinite digit=l number of sentences.that do fit on the shape , but orders of magnitute=C2 more, that do not fit. to attempt a naive representation, =A0 imagine a hemisphere, (symmetric), any continu=us line drawn on its surface , is a sentence. there are infini=e numbers of lines that can be drawn. however , trying to connect tw= points , directly without traversing the hemishpere is also infinitely possi=le but most solutions need to leave the surface. The pri=ciple that organizes the shape is NOT an input device. one can=map inputs onto the shape but it is not the shape , in my =A0 hemisphere bowl in 3 space, analogy, one can put marbles in=the bowl and they will map a path to the bottom. but the shape=of the bowl . determines how fast they move, and in which direction, . the=shape of the bowl is the language. there is a shap= for vision as well. . it exists without input, certain =aths are more probable .
