1. I will wait on Valeria. we can craft a fun few days

2, try this on but only if you get a moment =A0 , i know you are busy

it appears to me that ""language=quot; can be defined as the biological organizing principle that creates a shape space. "coherent sentences " are defined as those that fit on the shape. The projections of the sensory motors, allows communication. . There are an infinite digital number of sentences. that do fit on the shape , but orders of magnitude =A0 more, that do not fit. - to attempt a naive representation, =A0 imagine a hemisphere, (symmetric), any continuous line drawn on its surface , is a sentence. there are infinite numbers of lines that can be drawn. however , trying to connect two points , directly without traversing the hemisphere is also infinitely possible but most solutions need to leave the surface. The principle that organizes the shape is NOT an input device. one can map inputs onto the=shape but it is not THE shape , ex, a hemisphere bowl in 3 space,=analogy, one can put marbles in the bowl and they will map a path to the bottom. but the shape of the bowl . determines how fast they move, and in which direction, . the shape of the bowl is the language. =A0 there is a shape for vision as well. . it exists without input,=C2 certain paths are more probable etc.

3. I will contact Yang

<=r clear="all">

Valeria's not here right now,=so will have to check with her about late September. Really intriguing possibilities, and a delightful offer.

On Yang, I read his work quite differently. He does make use of word frequencies and probability distributions, but as far as I am aware in pretty straightforward and innocuous ways. And he's quite sophisticated about these=matters. Smart and interesting guy. You might want to contact him directly.

I don't recall his using Zipf=E2's "laws," but it wouldn't matter much. =A0 Mandelbrot showed back in the '50s that they were a statistical=artifact, near meaningless. I was, incidentally, surprised to see how he dealt with this result in his=autobiography. I think he called it his "Keplerian moment,=E2 or something like that.

I think you might try to plan on late september , ta=ing my apt and spending a few days with valeria in the city, A= it is the opening of the UN general assembly , as well as th= Clinton global initiative New york is rife with people with at least influence, if not new ideas. . I , we. can organ=ze many fun interactions. my house becomes a respite for the s=lect few, to take off their ties , and talk openly. You =ould be welcome to join as many create or participate as you prefer.=C2 yangs work deals with language as signals . his reliance on Zi=f like distributions is a good example of naive probablities. . =A0 empirically zipf appears. but cannot be derived from any of his or anyo=es elses to date. so somewhat misleading to suggest the" probility of word , x appearing, " it is=the mistake of frequency vs probablity, and careless common usage.

Sounds like a most interesting person= And someone it would be very interesting to talk to. I presum= he spends time in NY. Hope we can work it out.

Would be interested in learning more =bout your critique of the use of probability in language work, mostly by computational cognitive scientists, as far as I know. I =80 ve written critiques of it too, but on different grounds: failure to =ccount for what they are trying to show, or even to understand the issue.=C2 There are, I think, some notable exceptions, like the recent work of Charles Yang, one of Bob Berwick's student=.
