**To:** Valeria Chomsky  
**Subject:** Re:

the architecture would be highly tied to the vison equivalent, certain images allowed, certain sentences allowed. . . no theory on how they are crafted. . . in images the probability of near -by values are higher . I also like the idea that like puns. there are visual images that share two meanings. and both impossible to see as one.

valeria.chomsky@gmail.com>, Noam Chomsky [REDACTED]

<=iv dir="ltr">

look forward to seeing you on thurs. . . is there anything in writing on the institute idea? I would send anonymously so as not to pollute the work with press.

Is noam conversant with category theory as a notation for theories. ( any science of relationships objects collections, including mathematics). . . is language the equivalent of a subset of the sound/time domain , organized as a coherent shape space. exactly the same as an image as a coherent shape space in the light/visual domain. both including a time component? . . permitted morphism in the space would map to sentences. as they would mappings to objects in visual space.

in my discussion this week with a large group of AI people , I quoted the natural stupidity. story that you told me. . . however, I thought that as opposed to answers , the focus might be better on questions. than answers. Common sense is common to most animals, I suggested that it is the ,what more? why not ? that separates the higher functioning. ?
