Im only a few hours into her work, and strange=y enough . much of her evidence ( cognizant of my bias )=br> oddly enough , seems to be in support of my naive conjectur= that the mapping from external light ( an ordered set ) =to coherent mental image is homologous to the mapping from mecanical wave ( an ordered set ) to coherent sound image. ( I thought =ou to suggest that neither are necessarily required for thought =A0 functions ie language does not need sound nor light It is possilb=e that .thought units and their relationships can be represented by = space of the homologus maps .this is what i believe you have called=language. she has great examples of blind pe=sons representations of verticals , horizontals stronger than she understa=ds. many many useful but clearly not dispositive exampl=s. Also unclear whether some of her " blind" shared = deficient map from light to image or deficient from image to represenatio= ( sight blind ). I "smell" elegant theo=ies ahead )::

Very good to have a chance to talk today, as always.=C2 And enjoyed the follow-up conversation too. Interesting people= Especially Martin.

The study on acquisition of language by the blind th=t I mentioned is: Barbara Landau and Lila Gleitman, Language and Experience: Evidence from the Blind Child. From about 25 years ago. A real breakthrough at the time. There =99s been work since, much of it by Lila Gleitman and her students. L=la, incidentally, is someone you might want to get to know. An old friend, and a really outstanding psycholinguist-cognitive scientist= one of the best.
