I have a VERY thick skin, and love to=hear criticism. One of the best ways to learn. And I'v= often given up closely held beliefs on the basis of persuasive argumentation. But in this case, I just don't see the argue=ts.

It's true that the mathematic= lacks rigor, but that's for the same reason that publications in =rofessional math journals lack rigor. The steps that are not spelled out are straightforward enough so that they can be easily filled i=. I don't know of any problems about set theory, apart from =he classic ones. Some version of set theory is presupposed in every =ranch of math, including category theory. As for the brain as a computer, I'm not sure what you see as the problem.=C2 The papers I sent you do assume that l-language is a computational s=stem, with the properties mentioned, easily formalized. I don =99t know of any coherent alternative. Actually, very good professional mathematicians and physicists, one working primarily on quant=m computers, have attended my regular seminars for years, but I've=never heard a suggestion as to how mathematical ideas used in quantum theo=y would be relevant to systems of the kind we're considering. The "displacement conjecture =80 is, in fact, an immediate consequence of what would be the best poss=ble theory if it's true: SMT, in particular, the assumption that t=e basic combinatorial operation is the simplest one possible. Merge =s simply set-formation, presupposed in all of mathematics. I agree tha= it's naïve, if by that you mean very simple, arguably optima=ly so. But hasn't that been the pretty explicit goal of scie=ce, at least since Galileo, quantum theory included? I'd lik= to hear the objections, and hope to learn from them.<=p>

Noam
