Subject:	progress

incredible day

we measured 64 of the top sprinters in the world, three with world record times, 20 with olympic records and so forth

and measurements were highly repeatable—we measure every trait twice independently to reduce measurement error by ~37%

God bless the German, 2nd greatest in the world and hence measuring our key variable knee asymmetry, his measurements differed by a quarter to a mm which when averaged gives him in inaccuracy coefficient of ~13%

so wonderful athletes wonderful science

more later
