Attached are 2 site plan/floor plan drawings of the Helipad ATV Garage. The plan as drawn by Gensler will really not work because of the large eart= excavation which was done for the Mechanical Building. The proposed plan keeps the Lobby/Porch element where it was in the original pl=n and flips the Garage element to the East and creates an 'L' shape. This also helps to block the wind. I believe that the proposed plan creates a more enclosed entry court and a nicer experience. Also, there is the option of eliminating the existing Helipad Building completely=and including the Fire/Safety uses within the new building in the 'L' shaped section as shown on the plan. What do you think? </=>
