Jeffrey, and those who use an iphone in escalade:

I have installed a simple wire hanging from DVD player in ceiling. (th=s is the AUX port for RSE. (Rear Seat Entertainment).

to operate an Iphone:

-turn dash board radio on

-turn RSE (Rear Seat Entertainment) radio "on" located above=passenger seat.

push the SCR (source button above passenger seat to display AUX on DVD fold down screen.

Note: you must have rear seat entertainment selected "on" to=activate the RSE option on front radio, using the CD button.

-Select CD on front radio in the dash, 3 times till it reads RSE on=20 screen, this enables your Iphone to operate an listen to music, you will be able to receive phone calls on Iphone as normal. volume works through phone and dash board.

No charging to Iphone. if this is acceptable, I will hide wire so it i= not hanging from ceiling and locate it behind front passenger seat in the 8&quo=; flex dock.

I left the cord located in middle console, if you utilize this cord, i= will charge your phone if necessary, or charge and work an IPOD to listen t= music.

to operate:

selecting XM1 on radio in dash by selecting Band button till it displa=s XM1, will not work an Iphone, only Ipod. XM2 is the Satellite radio still.

I hope I'm getting close to solving this issue for you,

thank you,

Larry v
