**Subject:** wifi at 71st

i know that wifi has been stable but wanted =ake provisions for when it may act up again..

i asked al on whether or not a ruckus system could be =nstalled at 71st see his responses below..

should i pursue or =ait...  
please advise  
thank you

nice talking earlier..

does below explanation make sense?  
please advise  
thanks

There is. The short version is that =uckus/ubiquity/Cisco access points all require Ethernet network  
=onnections for power & data. (not correct as Power Over Ethernet (POE) is best but not =equired)

The current Ethernet wiring isn't in =ptimal places to make any of those solutions any kind of  
=mprovement. (I would have to =now the wiring layout to assess whether this is true or not) I =now the wiring there is  
limited but even on a bad day Ruckus will =utperform Apple devices.

We would have to rewire the entire =ouse to get better wireless. That rewire will be expensive and  
=isruptive. (new wiring is =lways best)

We're going to =nd up doing that eventually tho, the existing wiring looks like it =ould be 20+ years old.  
It won't reliably support over 100 Mbps =etwork connections — so that 200 Mbps upgrade Bella just =ecured isn't going  
to feel much faster. (100Mbps is slow compared to the highest speeds =ow available but please note that 100Mbps is  
10 times more speed than =s required to stream a movie)
