Subject:	Door seal

Jeffrey
I spoke to Tech ops,,
Most Likely what happened is called "rolling the door seal"
The seal is glued in a channel and also inflates,, If the glue is compromised the air leaks from underneath the door seal, most=likely would happen to us.
We have the upgraded door seal and moisture separating air pump that we chan=ed two years ago.
There are several functional checks Pete will do to make sure it's n=t a mechanical failure or dirty air filter for door seal,,
-to check if the glue is compromised, you have to manually inflate the door s=al and Pull to see if it separates from the door channel

Also,
Didn't have the chance to thank you in person yesterday with everyon= around,, Thank you for Bonus and allowing me to use that to install 2 Impact sliding d=ors as well as my new Payment schedule Rich discussed with me.

Thank you again!!

Larry
