understood but he had no idea of topologiical data m=mt. or its potential in genetics. =A0 he was a pure good but mostly philosophical thinker . =C2 i want a computer that feels? =A0 what does that mean. muliptle inputs. overlaid. not only horizontally but vertically, more like music, =C2 in addition to complex melodys in programming i want harmonies. =C2

I would not expect much out of bio co=puting, based on my knowledge of computer science, math and physics. Studied algebraic topology much 27 year ago for 1.5 years with https://en.wikipedia.org/wiki/Anatoly_Fomenko and [https://en.wikipedia.org/wiki/Sergei_Novikov_\(mathematician\)](https://en.wikipedia.org/wiki/Sergei_Novikov_(mathematician)) =A0- and since then put lots of shit in my brain, so perhaps it is not work=ng

he knew nothing re deep learning. nor do=s most. I dont find it interesting. im=looking for bio computing. . where multiple inputs milli=ns grow and intersect. . algebraic topolgy or knot theory potentially useful

Jeffrey,

I have re-read couple of articles, internet and his =ast book. I would not take him too seriously, even for deep learning =80 and quantum computers are completely different. Even though extremely competent scientist at that time, he had limited set of d=ta to analyze – this was a while ago.

Regards
