Th=re are 2 options the lamp guys are suggesting for electrifying the monkey =sculpture; one is drilling and attaching on top of the head, but with this option, the black cord would have to run down the l=ngth of the monkey's back; don't think that would look the best an= the lamp shade wouldn't be centered.(photos 1 and 2) The secon= option would be to drill and mount on one of the sides of the base. (phot= 3) I think I prefer this option, but we would just have to determine whic= side would be better to mount on.

For the red sculpture, there is really only one option which makes sen=e, to drill through the wicker in the back and put the pole through the ho=e. My only concern with this is if that will cause the wicker to start to =ntravel. The guys didn't seem too concerned about this happening, but i= was a thought of mine.

Your thoughts?
