I wanted to bring the old computers here, s= I could migrate them to the new machines myself.

=E2 I want to make sure they're set up right (current software= no adware, excess crap that may have accumulated on the older machines).&n=sp;

• The long delays you've seen i=stalling OS updates happened on the 6th floor yesterday — I want to=make sure I fix that on all the systems.

 =80 I need to set the machines to backup to the new drives we'll h=ve at each location (can't do that remotely without giving house ma=agers passwords).

• Data transfers will need special cables &=mp; adapters that the houses don't have.

=div>Basically, I want to avoid having these high powered machines slowed do=n because they weren't setup correctly.

Thank you,

James Ce
