Subject: WAPA / RO / Generator

clinton hedrington who hugo says is the most technical person =t wapa (and its chief operating officer) will come to LSJ either =omorrow or Thursday to hopefully get us up and running i =sked anna to have franks electric who verified cable for us present as =ell so we can get back to wapa power danny vicars =s on vacation this week which i think is a good thing as we will get =onest opinions without him directing professionals down his =ath...

TSG =ill come tomorrow to look at RO plant and they believe high pressure =ump failing is a IT programming issue..

plan b came to look at generators today =nd gave anna a grim report that the exhaust flaps rusted off and =llowed water and salt in compromising 1 generator that is =own plan b said that they believe we will need 2 =ew generators and will issue us a report this week on their =indings before we replace generators i want =o obtain a second opinion from another cat certified technician =E2 Remco - company in PR where we purchased"

daphne has been chasing remco to have them come =sap

don'= want to sound like a broken record but all our critical infrastructure =s not being looked after properly with danny in charge and i strongly =hink we need a change..

> =rote:

140 of 147 panels were =nstalled as of 11-28-2017
all inverters are up and =unning

new racking, conduit and wiring =ompleted

main =ssue currently is the multicluster box

we had 2 =nd 1 was damaged from storms

pro solar tried to =ix while onsite yet was unable to

last week i have =uthorized prosolar to order a new box which takes 4-6 weeks as they are =ustom made
cost is approximately =5k

once that box is installed we will be at =ull capacity of 36kw

currently we have 18kw =hich is sufficient to run 9 ac units at once at they draw 1-2kw each =ut
insufficient to run old RO that currently does not work..

generator =s not needed to charge batteries however it is necessary when we have =loudy days..

pro solar is also trying to source a new generator for us and =e need an RO solution (i still like
containerized units 250-300k =epending on size)

pro solar presented a generator =ption a few weeks ago however that unit was restricted to BVI and
could =ot be sold to USVI

generator and ro are next key items to get into =lace..

jimmy so far has been unhelpful with this =nd i have no trust in danny who i think is the main cause of
the =enerator / ro issues on LSJ..

i asked hugo hodge for a recommendation =oday of someone who can oversee our plant / electric / etc..
