Hi Jeffrey

I think the best way to execute this is as follows:<=:p>

- * Sell the 314,000 shares via a VWAP (volume weighted ave px) from 10am=12pm
- * Wait an hour (gives us some day light between th= purchase and sale so you had some market risk)
- * Buy=314,000 shares also via a VWAP for 2 hours (1pm-3pm)
- * =e will tell DB to take the commissions down by half on both legs

Let me know if that works.

Paul
