Subject: Re:

also max view was that he kept deborah informed=all the way along

do you recall whether you could write well as a child. ?

On vision, I know of some evidence that social interaction (mother-neonate) facilitates depth perception, but it's years ago.=C2 Maybe there is more now. But the experimental work has been with isolated individuals (kittens, mainly, I think), and seems to yield normal vision with early patterned stimulation. Let's talk about it some day.

I've thought about your suggestion. I think it's better to do it step by step, not bringing up issues of legal implications unless it's necessary. I'll write them renewing the request to replace Max by Richard Kahn, along the lines that we discussed by phone: that I simply can't trust Max and want someone trustworthy. I'd also like to give the gist of the memo, in particular that the marital trust is designed for those who established it, the IRA as backup.

Noam

no question in my mind that it is a huge benefit for the group. =C2 but my conjecture is that it is not necessarily good for the individual. . like being a hero (throwing you=yourself on a grenade) . good for the group not so good for the hero. . as writing forces a linear slow =ace. I wonder if in a large population , handwriting will be correlated with G. anyway = I need to get my mind off the way you have been getting screwed. =A0 drives me crazy.

Good to have a fun note.

I suspect that forcing children to do anything is probably harmful. But it's possible to introduce writing and (secondarily) reading in a way that seems to enhance thinking. That's the idea behind "invented spelling" (here's a link to some of the work:

https://pages.wustl.edu/files/pages/imce/treiman/Read%20%26%20Treiman_Childrens_Invented_Spelling_final.pdf). Back in the early '50s, a philosopher friend of mine (Israel Scheffler) brought me some pages on which his two-year old

son had written things that he thought were gibberish, wondering if = could make something of it. It was immediately obvious that the kin= had learned the names of the letters and was spontaneously stringing them=together to express himself in writing. And making interesting gener=lizations. Thus the letter "A", pronounced /ey/, he used f=r the words "came," "pet", "pat"; the letter="i", pronounced /ay/, he used for "pie", "pot,&qu=t; "but/" . And so on. It all made sense. Our kids d=d the same thing. Carol wrote some papers about it, Charles Read and=others carried it forward. Turns out to be a great way to teach read=ng too. Kids spontaneously express themselves, often in creative way, and =he transition to official orthography is not that difficult now that they =ave the general idea.

There's a debate about =t in educational circles, and though I haven't followed it, my impress=on is that old-fashioned forcing into a mold probably wins out, underminin= the joy of self-expression and possibly reading.

As you may=know, Galileo regarded invention of the alphabet as among the greatest of =ll human inventions. Can do no better than quote his own words. He=C2

Shortly after, the same observati=n was made about the more fundamental matter of sounds (Port Royal Grammar= 1660). I discovered all of this about 50 years ago and wrote about =t. Unknown then, still unknown, in my view some of the most profound=insights in the human sciences.

Smart guys, the f=unders of modern science.
