By Deepak Chopra, MD and P. Murali Doraiswamy, MD Artificial Intelligence (=I) has succeeded by being far-seeing; it's a field where proponents began =by envisioning a computer that can take over functions of the human brain, =like computation and logic. Today the field has progressed to the point where algorithms can recognize photo=, speech and emotions, fly a drone or drive a truck, spot early signs of diabetes or cancer, and play chess and poker at a championship level. Now, i= a leap that could be futuristic, absurd, or life-changing (nobody can predict which), the vision is of a ro=otics religion that worships an AI godhead.
