Subject:</=> SPECIAL WEATHER UPDATE--- YET ANOTHER TROPICAL DEPRESSION FORMS IN THE=ATLANTIC

The National Hurricane Center has initiated advisories on Tropical Depression Twelve (TD 12) located more than 1,450 miles to the east of the Virgin Islands near 14.1=degrees north, 43.4 degrees west. The depression has top winds of 35 miles per hour.

TD 12 is moving to the west at 12 miles per hour.=A motion towards the west-northwest at a slower forward speed is expected during the next two days. The depression is expected to become a tropical storm later today and could become a hurricane over the weekend.

As TD 12 moves over warm waters during the next few days, further strengthening seems likely. Forecast models suggest that the depression will turn to the west-northwest soon as it moves towards a=weakness in the subtropical ridge that is related partially to another weather system in the Atlantic.

While there is much uncertainty in the long range forecast, the projections keep this system well to the northeast of the Lesser Antilles. Based on the current forecast track, the center of TD 12 should pass some 429 miles east-northeast of the Virgin Islands on Sunday as a Category One hurricane with top winds of 90 miles per hour.
