Jeffrey,

I turned down the output Gain on the processor slightly, it was set very high, also turned down main output of crown Amps one notch. I played the system for 45min and didn't hear any clipping.
If memory servers correctly, the clipping is due to high gain to speakers.
I also notice the bypass button was pressed on the processor, this may have aided in clipping.
-also the tambourine on the L/H sub woofer would rattle during low bass music. I thought the speaker was blown,..

Let me know when I'm able to address gym?

Thx
Larry
