Jeanne,

I am still on vacation and apo=ogize, but I was waiting to contact you after I had my other meeting sched=led. I was trying to set up a permitting meeting with DPNR, but never got = response to my request. At this point I do not think I will be making it =he week of January 7-11. I have worked up preliminary numbers and have for=arded them to our business development people. I expect they will be setti=g up a call after the New Year.

Happy New Year,
Jeff

J=anne,

We've located a power meter on St. Thomas that we can use. We=can install it when we come down in January.

Jeanne,

I'll look into getting a power meter. We would install it on the 480 V side of the xfmr to include the line and xfmr losses in the readings. We would compare the temporary power meter to the utility meter, that would be a time and use study. This would be very valuable information to have to properly size the solar and energy storage system.

I should know my schedule for the week of January 7-11 by next week.

Jeff

Jeff,

The transformer for LSJ is located on the Island and owned by LSJ. This raises the questions:

- * What is the loss at the transformer?<u>
- * Do we need a time and use study?<=>
- * Can you install the power logger? <=>

Also let me know what day works for you and your team during the week of Jan 7-11 to visit the Island and I will coordinate setting it up.

Thanks <p>

Jeanne

Jeanne,

That would be one way to do it= but if you know the cable size, length and material a calculation can be =one quite accurately. You could also install a temporary power logger over=a week or so and then compare that to the utility meter.

If the cable was sized properly it should be less than 2% losses.

<=r>We have an excellent electrical contractor in St. Croix that has been wo=king for Hovensa for many years. Let me know if you want me to introduce h=m.

Jeff

Jeff,

We are trying to determine if there is significant line loss between=the meter on St. Thomas and the transformer on LSJ. One suggestion was =hat we purchase and install an industrial grade current transformer(CT) mo=itor at the main feeder capable, to meter the power in real time and send =t to a web server for review.

What do you think about this idea?

=p class="MsoNormal">Thanks,

Jean=e

=eanne,

An excel history will be fine for now, but can you at least send =s the latest copy of a bill so that we can see if there are any time-of-us= and/or demand charges. That type of data helps in our equipment sizing=calculations.

Thanks again,

J=ff

=eff,

Thanks for the follow up. We will compile the necessary information requests.

Do you prefer a copy of the electricity bills or an excel history of readings and usage?

Happy Thanksgiving to all.

Subject: LSJ Solar

Jeanne,

<=>Thank you for your time this afternoon and please forward this message to=anyone on your team that should have a copy.

TIC will perform a preliminary feasibility study=of solar energy production on LSJ Island. We are familiar with the challenges of designing and building solar in the Caribbean and have developed =ost effective solutions to meet these challenges.

Our initial thoughts are that a solar PV plant sized to meet the entire needs of the island would most likely be the best solution. This will require that we know as much about the electricity consumption and generation capabilities as possible. Please, provide us with 12-24 months of VIWAPA electricity bills and if possible any interval or=time-of-use data on consumption. This data may be available from strip charts or data logging of the generators when they were running.<=u>

We would also like to have the name plate data of the generators and a single line diagram of the electrical system.=u>

Also, please indicate on a map where we can locate the solar array and battery station.

=/p>

Thank you and have a Happy Thanksgiving,

Jeff=/u>
