A great conference and we are all on track for =lan.

Fabio suggests a pilot =xperiment of screening the subjects totally. Then doing long runs of =ive light no light in random order to try and cut down the main trial =r help to frame it, no hyper scanning at this stage. I tried it =oday as A was in London and a wooden door blocked some but not all the =nergy but all the light!

I would like =ou to meet Fabio, he has done hyperscanning in the Sistine Chapel =#8211; wow.

Could we please have £11K to do this experiment, 10K =or the small study and 1k for administration for the =niversity.

Peter
