Jeffrey

For starters,

Why couldn't I split the wire going to 1 of the Cabin speakers and run it to a small Powered Sunfire 12" Sub, to be located in the Blank=space behind the Fwd Club seating?

The Sub has a built-in crossover, so there shouldn't be any frequency loss to the full range speaker in the overhead, since the Sub is powered. = Just an idea?

Or do I have to get my signal direct out of the radio head in credenza?

Thx

Larry
