Jeffrey,

you were correct, Tuesday to paint shop.

we test flew the GIV today,. had a couple of issues, Communication radio speaker on CoPilots side was inop, APU TGT not reading on DU885's, and Throttle=rigging for autopilot... all have been repaired except for throttle rigging= should be able to bring to paint shop tomorrow afternoon.

-the autopilot flew the ILS approach to 75 feet above ground, usual decision=height is 200ft,. it was amazing!

photos below of Gavis camera,.
