Center Health is building an AI-based glucos= monitoring system for the 1 in 11 Americans who suffer from diabetes,=based on machine learning and their personalized AI, Aria. Users subsc=ibe to their disposable test strips, a $14B/yr US market, which are deliver=d monthly, as Aria learns about their diabetes and prompts behavioral chang=s to lower blood sugar. The system is an order of magnitude cheap=r than existing technologies, premised on leveraging data to help users see=what daily elements are affecting their blood sugar, and predicting da=gerous highs and lows before they happen.

Pros
— Existing glucometers from big companies are very ol=-fashioned and outdated, those companies make their revenue from overpriced=strips
— Direct competitors, such as iHeal=h and Dario have negative customer reviews and minor
— Uses FD=-approved circuits to get the approval in an automated manner
<=iv style="font-weight:normal">
=/font>

Cons
— Enormous pressure both f=om the industry players and companies such as Apple and Google that try to d=velop non-invasive glucose monitoring that will wipe out test strip product=
— Hardware startup without a product to sell yet, fin=lizing the development
— Young team
