**Subject:** green house layout

Pic 1: Damn thing will look =essy to you, but terribly (almost) efficient to me. Hanging plant areas =re great at edges, tiered benches also at edges.

Pic 2: Hanging example - but edges only are best =or this green house... The benches are serious, heavy duty.

Pic 3: Tomatoes, beans, or tall climbers that =ill need roping or support from above to take center. Your greenhouse =ill support several rows. This can also be used for lettuces or other =n-ground, sensitive plants.

Pic 6: Example =f bench depth, very deep.

Pic 8: OMG! I =ant one! Fun! However, do I have to be a small Mexican to =ide?!
