I'll call Tomorw. The equipment you chose is wrong, very wrong. I owned =tero cos in the past. I'm not sure why you chose it. It cann=t be tuned cannot. They are class d, cheap garbage.  
Marine amps=.

Good afternoon Jeffrey,

With all due respect, comparin= your aircraft to high end automobiles is a failed equation from numerous =erspectives.

From a very fundamental viewpoin=, a Mercedes S class has 109.4 cubic feet of interior volume compared to a=Gulfstream IV which has approximately 1,345 cubic feet of interior cabin v=lume. Simply stated, your GIV has over 12 times the cubic volume in the=cabin area of which sound is introduced.

When an audio system is designed=for a particular car, the manufacturer of the audio equipment is the one w=o designs and manufactures the equipment. When everyone is happy with t=e performance of the system, the manufacture builds thousands of the exact=same equipment - not a one off system.

Jeffrey I am not looking for exc=ses. We are highly involved installing entertainment equipment in many =ircraft like yours. Using car audio in aircraft is almost non-existent =oday, but we made an exception to please you. We presented various syst=m's and cost "seemed" to have been the driving and deciding factor.<=>

Most aircraft entertainment syst=m cost anywhere from \$200,000 to \$300,000 and as high as \$1.0M. They ar= fully digital systems with components specifically designed for aircraft =hat take into account size, weight, video and acoustic performance.=u>

I want to help you but aside fro= locating the "buzz" when the speakers are energized and having you pr=sent when we "tune the system" (which e can do with you on Friday morn=ng when you arrive - about 1 hours time), I believe this system is at the =ighest point of it's performance capabilities.

If you want to look at other options, then let's talk about this avenue. I want you to be happy - but realistic.

Below is an e-mail that was sent you along the way that you may find helpful.

Please call me when you have read through this e-mail and have a moment to discuss where we are and where you want to be.

Respectfully,

Eric

</=>

Jeffrey,</=pan>

<=>

The system has this "head unit" for control of the audio system through the touch screen. </=>

=/i>

=/i>

The DVD is integrated into this head unit as well as "Mirror Link" which allows you to stream Audio from your i-Phone, i-Pad via Bluetooth.</=>

=/i>

The video out of this unit will be connected to the existing AV module and displayed on the FWD Bulkhead monitor.

=/i>

A "fixed" aircraft i-Pad (customer supplied) will be located within the credenza and will provide audio and video.

=/i>

The DVD input will replace the existing DVD input.

=/i>

You will switch between iPod and DVD from this head unit which will be installed in the credenza.

=/i>

The rest of the video will remain as it is being controlled from the existing cabin management system switches.

=/i>

The existing audio will be replaced completely, with 2 sub amps and 2 subs positioned at either end of the credenza.

=/i>

The single amp will be replaced with 2 amps to maintain the 10 speaker configuration being relocated to the PSU (5 per side for even sound distribution through the cabin).

=/i>

All of the source selections and volume controls will be done through the head unit in the credenza.

=/i>

Since this is a car system the Apple app does not allow you to control the system with your phone / i-Pad, etc.
