Gino, I have just seen your video and i= is quite wrong, there is no point in measuring the GSR, as we are n=t interested in that. We are interested only in the subjective scali=g of the present not present signal. A key board for each subject is=fine, 10 will be the strongest they have known it and 0 will be absent. Th=se are relative measures as a first shot to see if we can check that the s=bjects are truly sensing or seeing something.

Your data stream is trial number and trial in=icated to the subjects trial is starting. To Alan at the same time this is=a GO or NOGO trial which is starting. After 2 mins trial light off, subjec=s rate light e.g. 4, light can be seen with a strength of 4 and ener=y strength of 6. Then 1 minute before the next trial and the s=quence repeated. The whole session to go on for about 45 mins then r=st then the next session.

<=pan style="font-size:11.0pt;font-family:"Calibri",sans-serif;c=lor:#1f497d">

Can you do this easily as via my schematic. </=>

Thanks, keep the technology simple as we =nly want simple answers.

<=pan style="font-size:11.0pt;font-family:"Calibri",sans-serif;c=lor:#1f497d">

Peter
