Subject: RE: Payment for research

I sent this email to Gino as we only want a simple experiment to measure the ground. Peter

Gino, I have just seen your video and it is quite wrong, there is no point in measuring the =SR, as we are not interested in that. We are interested only in the subjective scaling of the present not present signal. A key word for each subject is fine, 10 will be the strongest they have known =t and 0 will be absent. These are relative measures as a first shot to see if we can check that the subjects are truly sensing or seeing something.

Your data stream is trial number and trial =ndicated to the subjects trial is starting. To Alan at the same time =his is a GO or NOGO trial which is starting. After 2 mins trial light =ff, subjects rate light e.g. 4, light can be seen with a strength =f 4 and energy strength of 6. Then 1 minute before the next =trial and the sequence repeated. The whole session to go on for =bout 45 mins then rest then the next session.

Can you do this easily as via my schematic. =o:p>

Thanks, keep the technology simple as we =nly want simple answers.

Peter

Subject: Re: Payment for =esearch

sorry the machine is old and not =nteresting. the label on it belongs to a differnet =type of machine
