Anna.

I have inspected the barge. There is a small 1/4" =y 4" tear in the hull forward port. I'm putting sealer =n it and on it. It is normally above the water line.

There is some internal damage on the port where =he bulkheads meet the hull. This is damage that can be repaired later =nd will not hinder out use of the ship. I will send photos when the =ystem allows it.

The hydraulic pumps are in Puerto Rico in =he FedEx facility. I'm hoping they fly here today.

Motors run. No leaks.

I experienced a vibration in the port side on the sea =rial that needs to be addressed at some future opportunity but it'= manageable but will slow us down a bit.

The information I got from Carlos about damage to =he barge and lack of any operational function of it, cannot be found. I =ave nothing positive to say about this.

Karl and I have pumped out and inspected =ach compartment. I have confidence that we are good to go as soon as we =eceive and install the hydraulic pump.

=
