Jeffrey,

Per our phone conversation, please find mids and offers below.

Please note these offers work for one transaction at EUR10mm payout - one offer done at this size with you cancel= the other offers.

Each digital payout : EUR10mm

Expiry 2-Feb-2015

Strike	Mid (EUR)	Offer (EUR)
1.22	1,330,900	1,419,200
1.21	1,003,800	1,091,900
1.20	762,400	850,400
1.19	583,500	671,300
1.18	453,800	541,500
1.17	347,400	435,000
1.16	275,100	362,700
1.15	220,700	308,200

Regards,
Daniel

Jeffrey, <=r>

This is a trade that is getting a lot of attention from hedge fund principals. Paul told me you have an options background and we thought this might be interesting for you.

We solved for the expiries European put digitals on EURUSD would need to have for the structure to have 10x payout at expiry.

Buy European digital puts in EURUSD =font face="sans-serif" size="3">

Spot Ref: 1.2655 =font face="sans-serif" size="3">

Strike: 1.2000

Payout: If EURUSD at or below 1.2000 at expiry: USD10mm

If EURUSD above 1.2000 at expiry: USD 0

Expiry: 02/01/15

Premium Offer: USD1mm (10x payout)

While implied vol in EURUSD has gone up a bit since the summer, it is still very low for historical standards. Many catalysts for why a EUR sell-off could happen, from renewed ECB monetary expansion, weak data out of Germany and faster US recovery leading to a stronger USD, between others.

3m ATM implied vol in EURUSD (source: Bloomberg)

Please note all prices are indicative and subject to change without notice.=/font>

Regards,
Daniel

Derivatives are financial transactions based upon one or more predetermined market factors where periodic payments (or a one-time lump-sum payment) are made by each of the parties to the transaction based upon the value of the market factor or factors. The amount of the payment(s) will either be set at a fixed amount or fluctuate as the value of the underlying market factor fluctuates. The underlying market factors are items or variables which are subject to market fluctuations; for example, interest rates, currency exchange rates, assets, stock prices, stock index levels, commodities or a combination of one or more of these factors. Derivatives are normally used either as a hedging device or as an investment vehicle. Over-the-counter (OTC) derivative transactions involve numerous risks including, among other, market, counterparty default and illiquidity risk. In certain transactions, you could lose your entire investment or incur unlimited loss.
