Subject:	Re: do you have time for a brief call today?

true, but they have other advantages. eg: in the iron example is that =pparently chinese companies are fucking international player over by =laying with the exchange rate So I think the hope there is that by pegging their own currency, they =ill save money and not get screwed

Another example could be Apple in Russia at the moment - they had to =alt sales because of the ruble fluctuation

> =n any possible asset class/currencies. But then this morning I realized =omething which is instead of just transacting in already existing =urrencies/assets we can go one step further meaning we can create them.
>
> so the case in point is that I read somewhere that people transacting =n Iron are thinking about creating their own currency just for that =ype of transaction (the reasons are interesting but maybe another =ime). But that's a lot of work for them, cause they need to create the =urrency and then the network to accept the transaction etc etc.
>
> Whereas what we do is essentially a webpage where a company can go and =reate its own currency with its own rules "IronCurrency can only be =sed by this list of users in the network and its pegged to the dollar =tc etc". What we do then is to create the new currency for them and add =t to our network and they are ready to go in essentially no time.
>
> Maybe I'm overly excited but I think it's a great idea because you =ssentially allow people to create their own currency with the click of = button and start using it in zero time.
