STEAM CLEAN with laurndry detergent ♦=A0 first step

Observations: Colonization of Gloe=capsa magma.

Gloeocapsa magma(MOLD):

This organism is slowly eating =way at the calcium granules which can play a major role in causing decompo=ition.

Cleaning Recommendations; Steam Cleaning:

Due to the composition of this complex yet natural material we recommended that no acid or harsh chemicals to be used; however a mild alkaline can be incorporated into the cleaning. Natural surfaces require a natural cleaning; steam cleaning at quarterly intervals or when necessary as to kill and remove the residing micro-organisms within. With this process the surface keeps its true colour and superb properties.

Sealing; Not Re=ommended:

In keeping with the composition of this material and its present surroundings, there is no evident threat that renders jeopardizing its natural properties. It is a material that can be maintained, worked on and repaired to perfection, maintaining the beauty of the piece without synthetic alterations.

Please find attached the quotation as you requested; should you require any further information that may assist All Aspects Maintenance Limited in carrying out our recommended services at your location, please don't hesitate to contact us.
