Morning =ichard,

Let =99s schedule Friday morning at 10 EST.

I =99ve asked Dan to wrap up his synopsis today. I just need the detail so =e can accurately record what  
transpired.

Regards,

Brian =alden

Good Afternoon Richard,

Please see the below email containing Dan's summary of what actions he performed on his last visit to GSJ.

Regards, =/span>

Subject: Re: FW: Friday June 29th

Good afternoon all, sorry for the delay my email had an issue and became unlinked so I wasn't receiving these until now. Regarding GSJ here is what's been achieved.

-all Aquion battery modules are wired to bypass the corroded, water damaged circuit boards that could interfere with charging profiles.

-sunny islands (6) were downgraded to firmware version 6.0.02. This was done to allow a broader, linear charge profile to be set

-charging parameters are now based on voltage set points rather than state of charge calculations done internally with different references.

-max charge voltage has been set to 58.5V and the batteries will not stop charging until a voltage 1.5V over the set limit is achieved for 15 seconds. This gives them the ability to surpass the previous charge voltage of 56.7V

- the main issue that caused so much down time before was as follows. A target charge voltage that matched the Aquion batteries was not possible with the previous profile. Complicating that was faulty Aquion circuit boards preventing the batteries from properly charging to a suitable voltage. Aquion, as we know, is no more, so it's impossible to obtain replacement parts. Aquion's bms never met the as advertised performance and created more issues than we could have imagined. In short, the changes I made allowed for a higher, more suitable battery voltage to be achieved and prevents the premature shutdown we saw before.

Again, sorry for the delay, hope all is well

Thanks

Dan Chrisman

Afternoon Richard,

Brad is traveling to San Francisco for a =onference and I'm boarding a plane to  
STX. I've asked =an to write a synopsis of his efforts and we have been monitoring for =roper function. I'll relay this  
tomorrow once he's =inished.

We're still evaluating but all is =unctioning as intended for the moment.  
Additional monitoring and =onfirmation are needed since the weather over the last week has been =xtremely cloudy.

Would it be possible to have our call on =hurs. afternoon at 3 EST?

Regards,

Brian Walden

Afternoon Rich,

I believe the normal boat arrival time is 8 or 8:30 a.m. in Redhook.

Dan will be there.

Afternoon Richard,

We're still trying to have a final discussion with Stefan as well as track down multiple 128MB or smaller SD cards to reboot the Sunnyboy inverters. We're moving as quickly as we can in order to execute the conversion plan but it looks like we have to push to Monday. Dan has shown Michael how to get the system back up and operating in the event of it dropping offline and that is working for the interim.

Regards,

Brian Walden
