Subject: Re: Batch Plant

Mr Epstein,

Yes Sir I thought about that. I know we have had issues with PSI and the mix designs of the concrete. I do have experience pouring up to 1400 yards a day (24-hour shift) so I can oversee this directly to make sure its done right. ♦=A0 We have a few options here;

- I will operate the machine (temporarily) until I can train an operator we can trust (its as complex as running a grain combine just need to track weights and do simple math)
- Purchase a product like Vita-Concrete - this has portland cement / sand / agg all mixed in we just break bags and add water and I can calculate how many lbs we need to order before pours
- Vita has premade mix designs up to 5000 psi and if we need more (dont think we will) then we can use additives like fly ash to up the psi

Very Respectfully,</=iv>

Good Afternoon Gentle=en,

I went over to St John to see the two Carmix trucks=that are for sale and they are not worth buying. They would need total refurbishment to get them up and running properly. I have pictures=of them if anyone would like me to send. I think if we want a mobile=batch plant / mixer we should order a new Carmix truck (5.5 XL) that can mix 7 yards per batch. I have attached the specs on this truck to this=email.

Very Respectfully,
<=r>
