Richard:

Photo 9039 is a leak originating from one of the two PX units =n the skid.
This leak has been there since before Gemini =ot involved. We wanted to
complete all the other =pgrades to the unit before taking this one on.

Photo 9040 is a leak from the new cartridge filter housing. =nbsp;We reported
this at the time of commissioning. =nbsp;We filed a warranty claim with the
manufacturer on =ehalf of LSJ but they were late in getting the new seal
sent to us. We had planned on changing this seal when =e were last on
island but the seal showed up a week =ater. We will be addressing this leak
when we =eturn to install the new intake pump station the week of January
21st.

Do you have any =pdate on the status of the new fiber optic cable? This
needs to be in place and terminated before we get there to =ermit the
control system to be finalized.

Dean

Good afternoon. I visited LSJ yesterday and noticed a few spots with water leaking. Can you please explain so I can understand better. Thank you.
