I have a little technical difficulty,
To use the IPad as a source for Synthetic Vision, it requires Wifi to link t= our Stratus ADS-B receiver for information., also, the KIVIC HUD Display a=so requires Wifi to display info from the IPad as well, since it's w=reless.,

I can't use 2 Wifi source to the iPad is my issue,,

I'm able to display Raw ForeFlight info for Synthetic Vision ,, But n= terrain since that is provided by the Stratus ADS-B Unit.,
If I can find a way to hard wire the iPad to the KIVIC HUD Unit, so it would=free up use of Wifi info from ADS-B,,

Or,, we need to look harder in utilizing the Micro Projector to Display on a=Clear screen, since the Projector uses hard wire HDMI cable for source from=the IPad which will allow me to have Wifi ADS-B info to the iPad,
We are close,

The HUD Unit at Banyon Pilot show, has a built in ADS-B receiver, I guess th=t is why it's $2k

I'm still working it,,

Just an update

Thx
Larry
