Richard:

=p class="MsoNormal">>For Little St. James, with exception to coordinating shipping of the pump station equipment, travel and housing, the primary task that needs to be completed on island is the installation and termination of the fiber optic cable between the RO plant and the seawater pump station. I will be coordinating the shipping and travel with Daphne. We really need to have the fiber optic cable ready before we come down so everything on LSJ can be completed during this trip.

As for the Great St. James=project, I was planning on calling Brice and Mike this week to discuss interconnecting piping, power and control conduits, power to the seawater pump station and the anchoring of the container.
