Subject: HUD update
Attachments: image1.jpeg; Untitled attachment 00713.txt

Jeffrey,

We played with the HUD, Projector and reflective screen you purchased.

When we shoot the Micro projector on the reflective screen, the image is Bar=ly visible, as if the Brightness is to strong, i tried minimal brightness, s=ill didn't work.

The DUAL Wifi devise you sent the link, appears to be a Dual Wifi capable un=t, but the PC or Ipad will only use 1 input source from the Dual wifi conne=tion, the YouTube link, describes the functionality as, Dual wifi, which ev=r is the fastest link, and will automatically switch to the other source of=Wifi, such as Cellular link, to Wifi link, It doesn't sound like the unit allows 2 seperate Wifi sources to the=IPad like i require,.

The HUD reflector unit that you place your iphone, works well, accept,, the i=age is reversed. See photo attached.

Note***

the Epic Eagle HUD Version 2, that is not available yet, will allow Garmin 1=00 Flight deck to display on the Epic Eagle HUD, Appears the Epic Eagle HUD Version 1 that is in stock at the pilot shop woul= work fine, and we are not missing any improvements waiting for the Version=2.,
